The Role of Community Health Workers

Some communities are more vulnerable to misinformation than others.

Community health workers from different background and experience in many healthcare fields agree that all communities are vulnerable to misinformation, with some communities being especially vulnerable due to:

- Cultural Values & Norms
- Linguistic barriers
- Discrimination
- Difficult healthcare system
- Social statuses (immigration, refugee)

"Misinformation travels like a chain"

Community Health Workers are leaders and trusted sources of information for many communities.

CHW's are professionals in various healthcare background and are seen by many as reliable and trusted sources of information. CHW's are key in preventing the spread of disinformation and connect community members to valid resources.

"As a patient navigator, we are taught to be a source, but also teach others how to navigate"

S.I.F.T

SIFT is a proven 4-step method that stops the spread of misinformation.

1

Before you share with others through word or social media, **STOP**. Consider what you know about the topic and what source is giving you the information

2

INVESTIGATE the source. Take the time to look up the author or website. Is the source valid or reliable?

3

FIND better coverage. Are other reliable sources saying the same information or disputing it?

4

TRACE back to the original source. Where did the claim begin? Is the claim being blown out of context? Is there a certain agenda to it?
